PROFESSIONAL SUMMARY

Fullstack Engineer with 3+ years experience building scalable web applications across frontend and backend systems. Strong in React, TypeScript, ASP.NET, and modern UI development, with hands-on experience designing RESTful APIs, managing relational databases, and implementing secure authentication systems. Currently building payments, subscriptions and internal tooling for a regulated investment platform. Focused on building reliable, fast and performant systems.

TECHNICAL SKILLS

Frontend Technologies
React.js, Nextjs, TypeScript, JavaScript, Tailwind CSS, Ant Design, GSAP

Backend API Framework
C# ASP.NET, Entity Framework Core, SQL, PostgreSQL, Redis, Node, PHP (Laravel)

Architecture & Performance
RESTful API Design, SOLID Principles, Microservices, JWT, Role Based Access Control, Multi-Factor Authentication

Testing
Jest, Vitest, React Testing Library, Cypress (end-to-end testing), Unit Testing (NUnit, xUnit)

State & Data
Redux Toolkit, Zustand, TanStack Query, REST API Integration

Tools
Git, GitHub, GitHub Actions, Docker, Sentry, Firebase, Figma, Chrome DevTools, Vercel, Vite, Cursor, Github Copilot, Claude Code

EXPERIENCE

Fullstack Engineer 05/2026 – Present
Eanvest Lagos, Nigeria (Hybrid)

- Automated wallet funding for a live investment platform with Paystack webhooks (C#, ASP.NET Core, PostgreSQL), crediting every deposit exactly once with no customer action needed.
- Built daily automated reconciliation and a double-entry ledger with NGN and USD wallets, cutting the time to detect balance discrepancies from weeks to under a day.
- Built reliable ASP.NET Core microservices with the transactional outbox pattern, retrying background workers and optimistic concurrency, so no update or event is lost.
- Launched a new subscription revenue line end to end, from card checkout and auto-renewal to refunds and premium access, including iOS and Android in-app purchases via RevenueCat.
- Led the admin platform modernisation (React, TypeScript, Ant Design, TanStack Query), halving code in its largest screens and adding its first automated tests and CI.
- Delivered KYC and compliance workflows with bulk review, standardised decisions and four-eyes approval, reducing manual review time for the compliance team.
- Strengthened security and data protection with multi-factor authentication, secure session management and NDPR-aligned masking of personal data across services.
- Mentored engineers through code review and raised delivery quality with shared libraries, automated testing and CI quality gates, making test environments ~80% faster to start.

Fullstack Developer (Owner) 06/2025 – Present
The Gooey Spot Bakery

- Designed and developed a web platform to showcase products, manage orders, and handle customer interactions.
- Deployed and managed backend services on an InterServer VPS, handling API hosting, server configuration, and production deployments.
- Built fullstack features including product listings, order workflows, reward/referral system, and customer data management.
- Implemented payment-ready flows and structured order tracking systems to support real-world transactions.
- Developed RESTful APIs to handle order processing, product data, and user interactions.

- Managed database design for products, orders, and customer records using relational data models.
- Optimized user experience for mobile users, improving accessibility and conversion for online orders.

Frontend Engineer (Engineering Program) 01/2025 – 12/2025
Rise Academy (RiseVest) Lagos, Nigeria
- Managed complex application state using Redux and Zustand to handle financial data such as user balances, transactions, and asynchronous API states.
- Implemented secure authentication flows and session handling, ensuring proper validation and protected access to sensitive user data.
- Built modern frontend applications using React, TypeScript, and Vite, following component-based and system-oriented design patterns.
- Worked with global state management, REST API integration, and authentication flows in production-style projects.
- Participated in code reviews, PR workflows, and collaborative development in an Agile environment.

.NET Backend Engineer 02/2024 – 06/2025
Ampstem Remote
- Designed and implemented RESTful APIs to support frontend applications, handling authentication, validation, and core business logic.
- Built admin dashboard for user management, data processing, and application workflows using relational databases.
- Implemented secure authentication systems using JWT and role-based access control to protect application endpoints.
- Implemented comprehensive audit, documentation, activity-tracking systems across all Backend APIs.
- Optimized database queries and API performance, reducing response times and improving data efficiency.

Freelance Wix Website Developer 01/2023 – 07/2024
Freelance Remote
- Designed and developed responsive business websites using Wix, tailored to client branding and user experience requirements.
- Built and customized landing pages, product/service pages, and contact flows to improve user engagement and conversions.
- Implemented SEO best practices, improving website visibility and search engine ranking.
- Optimized website performance, responsiveness, and mobile usability across devices.
- Collaborated directly with clients to gather requirements, iterate on designs, and deliver production-ready websites.

PROJECTS

Eanvest — Investment Platform Website
Tech: Next.js, React, TypeScript, Tailwind CSS, GSAP, Motion, TanStack Query, MDX
- Built the public-facing website for an investment platform, presenting stocks, mutual funds, bonds and treasury bills.
- Integrated live Nigerian and US stock prices and charts through Next.js API routes.
- Built scroll-driven animations with GSAP and Motion, with reduced-motion support for accessibility.
- Created legal and FAQ pages with MDX, including search and a sticky table of contents.
- Improved accessibility and SEO with WCAG AA contrast, structured data, a sitemap and security headers.

TheGooeySpot — Bakery Ordering Platform
Tech: ASP.NET Core, C#, React.js, PostgreSQL, Docker
- Built a fullstack web application for managing products, orders, and customer interactions.
- Developed RESTful APIs using ASP.NET Core for order processing and user management.
- Implemented authentication and role-based access control (JWT, RBAC).
- Designed and managed a PostgreSQL database for products, orders, and users.
- Deployed and managed the application on a VPS using Docker.
- Built responsive frontend interfaces with React and Tailwind CSS.

GitHub: Backend, Frontend

Gbese - Peer-to-Peer Credit Transfer Platform (Capstone Project)
Tech: React, Redux, Tailwind CSS, shadcn/ui, TanStack Query
Built user-facing financial interfaces for a peer-to-peer credit transfer platform enabling users to manage debts and transfer balances between wallets.
• Implemented complex state management using Redux Toolkit to maintain consistent financial transaction flows across multiple UI steps.
• Integrated REST APIs and implemented validation, loading states, and error handling to ensure reliable transaction behavior.
• Designed responsive layouts and clear user feedback patterns for financial operations where accuracy and usability were critical.
• Collaborated with backend developers to align frontend transaction flows with API logic.

MultiLearn - E-Learning Platform (Solo Project)
Tech: React, TypeScript, Tailwind CSS, Zustand, Firebase, TanStack Query
- Designed and developed a full learning platform with authentication, user dashboards, and course management interfaces.
- Built modular, reusable React components to maintain consistent UI behavior across multiple pages.
- Implemented API-driven data fetching and state management to ensure smooth navigation and consistent UI state.
- Focused on responsive design and performance optimization to support both desktop and mobile users.
